11 RISK MANAGEMENT
12 REPORTING

13 INVESTIGATION
14 INSPECTIONS
15 SHARING
16 SECURITY PARTNER

- **Document System**: Ensure vessels are compliant with all statutory and trading certificates in our compliance module. Stay up to date with automatic triggers and alerts for certificates requiring action.

- **Work Planning**: Keep your critical spares list up to date with our Mobility platform which lets you perform inventory audits, labeling and scanning on the go.

- **Monitors**: Keep improving the planned maintenance system through a formal change request process for monitoring and implementation of changes and/or correction to maintenance information within the platform.

- **Smart Data**: Ensure all procedures are available within the document system. With the ability to have virtual manuals create specific manual sets from different manuals to assist masters and vessel officers have easy access to updated procedures and documentation.

- **Compliance**: Use the built-in Navigational Assessments module with electronic checklists for the master to assess the preparation of the bridge team. The Navigational Assessment Checklist can also be completed on Mobility.

- **Inventory**: Realtime monitoring of change requests in the organisation and current status of the same. Visibility provides insight into pending requests by classification or by process stages.

- **Keep Improving**: Ensure all relevant risks are controlled using the Risk Assessment solution on the platform linked to the management of change requested.

- **Procedures**: Setup easy reporting procedures for Near Misses, Incidents and Accidents within the integrated ShipNet One platform.

- **Assessments**: Perform a thorough incident investigation. The platform also supports the System Cause Analysis Technique© to assist the investigators reach the correct root cause(s).

- **Progress**: Implement Ship Safety Inspections by the Safety Officers or Junior Officers onboard. Assess the safety culture by regular shore inspections onboard the vessels.

- **Risk Management**: Share best practices and critical information across the fleet using the document system to promulgate safety alerts or fleet circulars.

- **Reporting**: Shiplnet consults with F-Secure, and can assist in securing the infrastructure for shore and vessels keeping up with the latest protection measures in cyber security.
