

Drive accurate results aligned to organizational goals through visibility, flexibility, and accessibility of integrated, real-time financial data.

MARITIME  REDEFINED

FINANCE XE

Accounting Solutions - Fact Sheet

Current Accounting Challenges within the Shipping Industry

Maritime Businesses face the challenge of sourcing a dedicated accounting system tailored to the shipping industry. Generic mainstream accounting software platforms are disconnected from other mission-critical commercial and procurement shipping processes, resulting in duplication of data to ensure consistency across platforms, which in turn causes a decrease in efficiency and an increase in costs. The lack of real-time data available across disconnected platforms causes accounting departments to struggle to control and maintain the financial goals for maritime business.

Introducing Finance XE

Finance XE is a specialized multi-company, multi-currency accounting software explicitly designed for shipping businesses and their accounting needs, providing powerful real-time reporting possibilities combined with extremely high levels of flexibility in setting up parametrization/dimensions. The philosophy behind the Finance XE platform is to enable shipping businesses to execute & customize more in one go.

By harnessing the visibility, flexibility and accessibility of high integrity real-time financial data available within Finance XE enable accounting teams to proactively increase efficiencies, reduce cost & risk while resolving exceptions & issues and complying with global accounting standards and legislative requirements.
