

ShipConnect & MRV

Getting timely and accurate information about your vessel's speed and performance can be critical for the profitability of ongoing as well as upcoming voyages. Not only in regard to ETA's and other operational elements, but also understanding the details of your fleet's speed and performance profile can be critical. The ever-increasing demand on legislative requirements on bunker consumption and the reporting requirements that follow is pushing more and more administrative work to shipboard staff.

The ShipNet ShipConnect and MRV solution combines the ability to easily deploy and capture all performance related information from your vessels which updates your shore staff directly, with no manual duplication of work. At the same time enabling performance analysis and reporting as well as meeting the EU MRV reporting requirements.

Key features

- Easily deployed to the entire fleet, including Time Charter as there is no need for vessel installation.
- Full transparency of your fleet's daily speed and performance.
- Significant operational efficiencies with a high level of checks and validations.
- Access to the Full Statement of Facts directly from the ship as well as the ability to add any reporting element required.
- Allows and enables auto distribution of forms and e-mails to your counterparties.

Key benefits:

- Significantly increase operational efficiency.
- Full transparency of your fleet speed and performance details.
- Ability to submit forms and e-mails directly from the solution.

Data available within ShipConnect & MRV

Fleet speed and performance

Full transparency of your vessel speed and performance details, including details such as weather information and sea state.

Off-hire

Vessels can report off-hire activities directly from ShipConnect for support of calculating such as fleet utilisation as well as off-hire analysis.

E-mail templates

The solution allows for defining e-mail templates to be submitted to counterparties (agents/charterers etc) as well as internally. E-mail alerts can also be supported.

Forms

The solution allows for the creation of PDF and Word forms directly in the system with no need for manual creation of these. Free text fields for comments are supported.

Noon/Arrival/Departure/In-port

The solution supports all type of messages required for getting a full overview of your ship performance. This is including the ability to capture a full Statement of Facts reported to shore, with a direct integration to the demurrage calculation tool within ShipNet Voyage Manager.
